Great Activity at the Gas Wells.

Large Quantities of Boring Material
Arriving Daily.

Over 500 Feet of Drilling on New Well Completed--
Tower of Second Well being Erected--Three Others
to be Rushed.

Delayed somewhat during the past two months by the severity of the weather, the past week has witnessed considerable progress made by the officials connected with the gas operations at Bow Island.

The new well, upon which operations commenced some little time ago, has now 200 feet of boring completed, the drillers at present working through a heavy gusher. Gas is expected to be encountered at a depth of about 2,000 feet. In drilling this well, and when at a depth of about 200 feet, an extraordinary strong flow of absolutely pure water was struck, and considerable difficulty was experienced in capturing it. This, however, was eventually accomplished and now we are assured the boring is proceeding very satisfactorily.

In addition to the one described above, another tower is now being erected east of "Old Glory" also, upon the completion of which a second well will be sunk, and consequently another camp will be formed. It is the intention of the officials, we understand, to make operations upon these two wells particularly, and at the same time make arrangements to establish three more wells west of "Old Glory", probably between the latter and Cleary Creek.

At present there are thirty men employed at the one well, exclusive of

teamsters, etc., but this force will be considerably augmented in the course of a few days with the arrival of more drillers.

It is quite evident that it is the intention of the company to push matters to the extreme, as is evidenced by the constant arrival and departure of various officials, and also by the stream of cars arriving here now daily with material destined for the gas field. These latter comprise cars of heavy timber, engines, pipe of various dimensions, and the hundred and one different items required in a work of this magnitude.

Various conjectures and rumors are naturally rife as to the ultimate intentions of the C.P.R. at this point, but there is undoubtedly a very strong suspicion prevailing, and one which is believed for which there is considerable reason, that Bow Island will see during the coming summer some very important projects being instituted here.

With regard to the time as to when gas can be expected in town, a rumor, which is said to be based upon a good foundation, has it that strong efforts are to be made so that gas can be piped in and be utilized by the U.P.R. by June at the latest.

It is to be hoped that the C.P.R. is anxious to acquire it remains to be seen.

Seed Grain for Settlers

Seed will be Distributed from Winnifred, Bow Island
and Burdett about March 14.

For some time past the authorities of the Immigration Department have been investigating the needs of the homesteaders in Southern Alberta, who have suffered from the drought last summer. C. Mair, the Immigration agent at Combe, in company with an officer from Winnipeg, has driven over a large part of the country and the department has received their reports. They found that a good many new settlers would be in need of seed grain, it taking all they had to feed themselves and their stock.

This assistance will be given only to homesteaders who have made entry prior to July 1, 1910. The distribution of seed will take place from Combe, Warner, Lethbridge, Taber, Winnifred, Bow Island, Burdett, Medicine Hat and Irvine.

If it had not been for the succession of snow storms the distribution would have taken place on February 20, but it has been postponed to March 11, when the necessary supplies will be shod on cars at the places mentioned for distribution to those homesteaders whose applications have been received and accepted.

The system of distribution will require the homesteader to be present at the point of distribution the authorities to limit by the Commissioner of Immigration at Winnipeg. On the presentation of this authority the grain will be handed over and the receipt for same taken.

No application for seed grain will be received at Winnipeg after the first of March.

Double Murder at Taber

Warrant Out for Jap Assassin.

Taber, Feb. 11.—What appears to be a shocking double murder, occurred at the house on the river bottom about three miles north of town last night. The victims are Jack Erskine, aged about twenty-five and a woman known here by the name of Babe Adams, of about the same age.

Details are vague and the Mount of Police are very reticent, refusing to give any information or express any theories.

Word of the murder was brought into town this morning by a Chinese cook who for some time has been the only other resident in the house with the woman.

He found the man Erskine in his mistress's bedroom, riddled with bullets and dead. The woman was lying on the floor, bleeding as fast as his legs could carry him he came into town reporting the matter first to the livery stable where Erskine worked

and then to Serg. Mason, of the Mounted Police.

The first impression created by the Chinaman's story was that Erskine had been murdered by the woman who had made her escape in the night. Serg. Mason with one or two Mounted Police, immediately went out to the scene of the murder and found the woman lying at the back of the house, dead, and with seven or eight bullet holes in her body.

What information the Chinaman may have given the police as to any parties who were in the house last night is not known for Serg. Mason will give nothing out.

The theory of a murder and suicide by either of the parties is scouted. From the nature of the wounds it is thought as though the party who did the shooting first of all shot the man and then took after the woman who had terrified him from the house, even

CONSERVATION

The world is appalled at the rapid disappearance of its natural resources. During the last decade especially. Statistics show that the time is not far distant when our natural resources will be so reduced that their cost, owing to unlimited demand and limited supply, will place them beyond the reach of all, save the favored few.

It is not my intention to enter into a lengthy discussion of the topic that is occupying the time and brains of more able men. However, I wish to call your attention to the fact that TIME is the most valuable asset that we possess, and that, to the farmers, business and professional men there is no more valuable asset to the conservation of this most valuable asset than Massey-Harris Farm Implements, Bain Wagons, Verity Ploughs, Four City Gasoline Tractors, Verity Engine Gauge Ploughs, Oils Stationary Gas and Gasoline Engines, Gray Carriages and Buggies, Canadian Alexander Windmills and Pumps, Massey Campbell Fanning Mills and Seed Cleaners, Monarch Well Drilling Machinery, Chatham Seales, Kitchen Cabinets, Cream Separators, etc.

The above machines have been selected from a large number of other makes for their lightness of draft, ease of operating, and lasting qualities. All are absolutely guaranteed to do the work for which they are made in the best possible manner. They are made by responsible firms that are able, willing, and do live up to their guarantee.

Call on E. B. Ludtke, opposite Begg's, Livery Stable, and he will be only too glad to show you this magnificent line of the latest and best Farm Machinery. He also carries a full line of feed oats, barley, corn, beans, shorts and hay. Our hatchet is always out. Come in!

DAME FASHION'S DECREES

WHAT to include in the winter outfit is a serious question in these days when dress plays so important a part in life. No woman cares to invest too extravagantly and rashly in gowns as eccentric as those that fashion has for the moment advocated. At the same time, if a woman is to take a prominent position socially it is most requisite she be well gowned. There can be no denying that to be well owned gives a quiet assurance and independence that are hard to

There are so many different gowns requisite now in a complete outfit that it is best to choose most carefully in order to select only what will be satisfactory. The street costume is all important, and not only one but two and three and four. For the practical, serviceable everyday morning street gown

avorite combination, and there are any number of attractive grows of this combination. Caldon and silk violet, white or pale coral, combined with velvet or wide bands of fur, are also popular. These grows are all long, not with exaggerated length, but quite unlike the long round skirt. Black lace over white, white lace over black, is immensely fashionable for this season. The value of a gown is not in the lace, but in the fur, for while real lace is conceded to be a most desirable possession, it is not always a practical one, and the more valuable it is the harder is it to deal with, as to cut into it would be to ruin it. The lace grows of this season are made of the contents of any lace treasure box. While the value may not be in the lace that comparable, far better effects are obtained from the way that com-

For some time the all white gown has not been so popularly popular, and even now there are many who contend that a color is smarter. But the beauty of the all white gown of this season is that it can be made in almost any style you desire—of silk or cloth, or with both, is most effective and becoming, and there are smart models with delightfully simple lines that will make the wearer look like a queen. The new styles have lace both in the front and back of the gown are becoming, while the wide band around the lower part of the skirt and then lace again in the waist is always effective. Plain cloth gowns are also very popular, and if they are worn with a sash, there can be good effect introduced on the waist, but not on the skirt, which is best left all the one color. In colors there are no limitations, and the dressmaker may choose what she likes, and veil de sole which, combined with elcch, velvet or fur, are effective and becoming. If the all one color, even if two shades of the same color, is chosen, the result will be better than silver or gold lace or insertion on the waist under the veil de sole or chiffon are always smart. There can be a touch

A black and white illustration of a woman from the chest up. She is wearing a large, dark, wide-brimmed hat with a decorative band. Her dress is light-colored with a dark, intricate pattern, possibly floral or paisley. She has a high collar and short sleeves. Her right hand is raised towards her neck. The background is plain white.

Mais Color Vous de Blue gown

of the velvet in a small waistcoat effect and in the folds of the belt, and at the moment the waist flashed with the belt far smarter and newer than the princess or Empire line.

THEM was a facetious bishop who went to preach a charitable sermon a short time ago in a northern diocese in England. The vicar of the parish being ill, a curate received him, and, thinking to say something pretty, observed: "I am grieved that you should have come on such a windy day."

But the youth found his grief misplaced when he of the laws sleeves and garters said: "Tut, tut, boy! Didn't I come to raise the wind?"

HOW ENGLAND RUNS NAVY

Nor the good old days of English wooden walls the King's navy is ruled by a lord high admiral. Drake and Raleigh swept the Spanish tides dignity dictated the policy of these cumbersome iron hulked ships. The navy has never failed to strike terror in the hearts of Philip's sailors. This great office is today, however, repressed by the Lords of the Admiralty.

The British have now launched her new ship in the world's fleet—the rainbows—one ship to patrol each ocean—it may be interesting to citizens of the Dominion to know just how the greatest navy in the world is managed. From the list comes the first Lord of the Admiralty, the civilian, who occupies a position as supreme head of the naval organization has been so many a time and oft in Pinafors

...his complete
"O.K." to you desk and never

which largely influences all other ap
ment. Should the readiness of the

For war or its mobilization over the emergency, his would be the supreme responsibility. The Second Sea Lord, who must be ready to step into his shoes if required, has a special responsibility for the fitting out of the ships and the training of the crews. The other two elements up to the rank of navigating officer. We taken care to the Third Lord, whose duty is the control of the building, the designs of the ships, the provision of guns and machinery. Below these a junior lord is in charge of transport and coaling, a civil lord of contracts and building, while a permanent secretary deals with the staff department and a parliamentary secretary with finance.

Recently a new body has been created to look after the navy. It is known as the Admiralty, and its functions will be largely akin to those of the general staff of the army. The constitution will differ from that of the army, but the duties will embrace the preparation and execution of plans for the conduct of war, the maintenance of the fleet, the disposition of fleet and squadron, and the organization of the fleet in accordance with the strategic plan laid upon it. A highly efficient staff will be created, and the Admiralty spring will also be among its charges.

So much for the business office of it. The fighting men have very much to say for themselves, and the House of Commons has been told of the humane kind have kept the Union victorious on the seven seas for 150 years. For all the years that have elapsed, the British navy has kept their picturesque three-deckers or the combined fleets of Europe and the United States from slavery, the men who have high and noble spirits, and the high and noble spirits of the same stuff as the first glint of age. The first fighting arm of the British Empire, the British navy, is a conservative institution.

world. Full admirals, vice-admirals and commodore are the orders of rank, shown by the heads of the navy. Subordinate to these are the admirals of the fleet, the field marshals of the navy, who serve as the hands of Britain's admirals in the limited safety of the realm. One admiral commands the North Sea, another the Channel, another the coast of Scotland; another watch and ward in the Channel, as on, enquiring if there be any ship, and if so, whether it be friendly or not. An officer's success depends greatly on the 'captain courageous' whom he serves. His ship is his power and responsibility, especially when in charge of a big ship, although these are those of a colonel in the army. The ship is his world, all confined within a small space, and the discipline is indispensable. A captain must therefore maintain a high standard of discipline. The admiral sort of Dalai Lama of the sea— and messing alone apart from his subordinates. Acting through his

THE CARE OF WINTER H
PLANTS

[illegible]

Each fresh air should be blown to the roots but no draught be allowed to strike the plants. Moisture in the atmosphere is essential, and should be provided by the steam which rises from a bowl of boiling water. In addition to this, all foliage should be sprayed weekly. A generous spraying of the pots stand in zinc trays till a hand-sprayer being so used. Or the pots may be placed on sides in the bathtub and then quickly and thoroughly sprinkled with tepid water from the shower. When plants are in blossom, merely sponge the flowers.

water is apt to mar the flowering of these plants. This weekly spraying of emulsion will prevent the growth of water plants, which must be done very thoroughly. In order to prevent the growth of water plants, the water should be poured on the soil, saturated and the surplus water through the outlet in the bottom of the tank. In watering ferns, the pots may be watered with water until the soil becomes moist.

The intervals between watering are determined by the nature of the plants and the soil. For instance, here is an instance where a plant is watered twice a week, absorbing much water, and others, and so needing water substantially from the major part of the year.

As most vegetable life takes its nourishment largely from the soil, to replenish this by using of the water is a most important consideration. Whatever the directions must be followed, for over-stimulation of the weakened growth of

HUMAN HAIR FIBRE
THE market in human hair has just been opened to the attention of textile in Great Britain.

The supply of this article in Great Britain is generally supposed; indeed, one textile manufacturer in Bradford stated that he has a share forty per cent of it whenever he requires it.

It is not, however, so easy to ascertain the uses to which this article is now being put.

Wig makers and ladies' hair dressers are the principal consumers, especially at the present time, prevailing fashion is for ladies' excessive hairdressing.

There is, however, for this article a source from which it is probably comes from the Continent.

It is especially produced in the district of the Rhine, and is derived from China. The Chinese are usually intensely black, and it detracts from the value, if it is not of the quality of the hair when, then, according to its grade, and dyed and finished over shade desired.

stated that as human hair is so rank and stout a growth as itself for use like horsehair in the manufacture of carpets, the interlining fabrics and of oils or perhaps of asbestos, might be a payment for the expense of the manufacture of the fabric. If it is of itself, its use being so blended with other materials, it would be a payment for the use of a manufacturer in Bradford the only one as yet in England weaving a cloth made entirely of horsehair. The fabric which is usually of a staple of from ten to twelve inches long, is thoroughly disinfected by steam, and the staple lengths up to ninety yards.

Not being so performed, the use of the natural color of the hair is a disadvantage for linings for men's wear, as it is so the advantage of being so strong and so durable. The sample forwarded for public inspection at the Manufacturers is somewhat

The Union Bank of Canada

Its 46th Annual Statement, the
Best in Its History

The first statement of the Union Bank of Canada, submitted at the annual general meeting of the shareholders, held on Saturday, December 17th, was a most satisfactory one. It shows a very liberal margin of profit over the amount required to maintain the bank. In fact, the bank earned at the rate of 14 per cent on the average paid up capital, and as a result the satisfactory earnings increased their dividend from 7 to 8 per cent. The net profits for the year, after deducting the expenses of the bank, interest due depositors, etc., etc., amounted to \$451,620. During the year 1909, 1,000 of new stock was issued at a premium of 25 per cent, amounting to \$385,540. These two sums, together with the balance brought forward, amount to \$1,100,000. The bank's account on November 30, 1909, amounting to \$235,000, made a total of \$864,070, which was available for distribution. This was applicable as follows:

Three quarterly dividends at the rate of 10 percent were paid in 1987, 2 per cent; a total of \$500,000, transferred to the rest account, this sum being made up of premiums on new stock and the balance of the 1986 dividend; the sum of \$1,000,000 (transferred) officers' pension fund, leaving a balance of \$1,000,000 carried forward. The paid-up capital rose to \$4,000,000, being increased by \$500,000 during the year, and the rest account now stands at \$1,000,000, having increased during the same period.

An examination of the statement shows that the deposits not bearing interest have increased by \$1,000,000, having increased by over \$3,000,000 during the year. This increase in the deposits not bearing interest indicates a withdrawal of funds from the bank for the part of the bank. The statement shows the bank to be particularly strong in its reserves in gold and Dominion notes, which are 100 per cent, of the total liabilities, and also that the assets immediately available to the bank are 100 per cent, of the loans, are very nearly \$15,000,000, or 37 per cent, of the total liabilities.

The credit for the year shows a growth of \$44,000 over the figure of the previous year. The bank has a total of \$1,000,000 in the bank an increase of \$50,000,000 during the same period. The total assets amount to the large sum of \$47,455,000, indicating that the Union Bank has a considerable amount of the larger of our financial institutions. The bank has a large number of branches in the city and in the surrounding areas, and it is one of the largest of the business community. The bank is also one of the largest of the business community, shown by the fact that it has loans to business houses of over \$30,000,000. A further indication of its growing importance in the country is the fact that it has a large number of branches in the city and in the surrounding areas, and it is one of the largest of the business community. The bank has been opened. Altogether the showing made by the bank is the best in its history and reflects the high credit accorded to the president, board and management.

RADIUM ISOLATED
THENETMO the metal known as a diamide has been certain salts with a basic character, and has been found; pure metallic radium has been found.
The isolation of pure radium has been accomplished by means of electricity, the result of the unremitting labor of Madame Curie and her co-laborer, Dr. Pierre Curie, who has been awarded the Nobel prize for his work. The metal is a white metal which alters rapidly when it comes in contact with the air, and is a powerful oxidizing agent. It is of black color. It burns paper, electrically decomposes water, and adheres firmly to iron.
This is about all that is known so far of this mysterious metal. The investigators had only one design: to isolate the metal, and to determine its properties. The preceding article will show the steps they succeeded in isolating it, though it will be able to study it at leisure.

SERMONS IN STONES
PROF. Frank Matthews, of Columbia, is one of the brilliant actors on the drama, said of an imagination promotes dramatics:
 "He is a man of great power. In the role, on being asked to examine Shakespeare meant by the phrase 'Sermon in stone'—
 "When passing by a tombstone you learn the name and the date of birth, and the date of death, and also from the inscription a value of the person from his or her life. We learn from the inscription the number of miles to town, and then acquire a graphic picture of the person. The roadside indicate that repairs are to take place, and so inculcate a lesson in teaching."

AT THE FALL OF TROY

HUMAN HAIR FIBRE
THE market in human hair

I feel that has recently brought the attention of serious textile makers in Great Britain.

This article has been widely much larger than is generally supposed; indeed, we textile makers in Bradford stated that he chose forty lots of it whenever he visited the city, and endeavored to ascertain the uses to which it was now being put.

Wig makers and ladies' hats are apparently its principal uses; but the greatest and most prevailing fashion is for ladies' extensive cuffs. The busy human hair used for this purpose is said to be of the same origin as an especially productive district, but large quantities are derived from China. The Chinese usually intensely black, and also brown, hair is bleached with hydrogen peroxide. They then sort, according to its grade, and dye and finish—over shade if desired.

stated that as human hair is so rank and stout a growth as itself for use like horsehair in the manufacture of carpets, interlining fabrics and of oils or perhaps of carpets, might be a payment for its existence, and that the fabric made of it is solely, its use being so blended with other materials. It was also stated that the manufacturer in Bradford was the only one as yet in England weaving a cloth made entirely of horsehair, and that the cloth is usually of a staple of from ten to twelve inches long, thoroughly disinfected by steam, and of a length up to ninety yards.

Not being performed, the value of the natural color of the hair was also mentioned as being for men's wear, as it is so the advantage of being so close to the skin, and the fact that the sample forwarded for public inspection at the Manufacturers is somewhat

LITHIUM TO THE M...

It was known certain salts with a radium basis, such as bromides and chlorides, were soluble in water and pure metallic radium had not been found.

The isolation of pure metallic radium has been the work of the French scientists, the result of the unrelenting efforts of Madame Curie and her co-laborer, Pierre. Thus isolated, radium appeared as a silvery white metal, which when it comes in contact with the air changes from white to the condition of a black powder. It is chemically decomposes water, and adheres firmly to iron.

It is known that all that is known so far of this mysterious metal. The investigators had only one design of radium salt to work with. But since they were not sure of the exact nature of the salts they succeeded in isolating it, they will be able to study it at leisure.

SERMONS IN STONES
PROF. FRANK MATTHEWS, of Columbia, is one of the brilliant actors on the drama, said of an imagination grows dramatic:
 "He is a man of great power. In the role, on being asked to examine Shakespeare meant by the phrase 'Sermon in stone'—
 "When passing by a tombstone you learn the name and the date of birth, and the date of death, and also from the inscription a value of the person from his or her life. We learn from the inscription the number of miles to town, and then acquire a graphic picture of the person. The roadside indicate that repairs to take place, and so inanimate a lesson to students."

ADVERTISING RATES

Transient Advertising such as legal notices, tenders, readers, etc., 12c per line 8c per line each subsequent line. Lost, Found, Wanted, etc., 50c for first insertion, 25c each additional one. Commercial Advertising rates on application. Professional Cards occupying one inch \$5.00 per quarter. Commercial Advertising payable monthly all other in advance. Four insertions constitute a month except per year contract.

To ensure insertion of advertisements and new ads, notification of same must be made to this office before 12 o'clock noon Wednesday of each week. Local items of interest as news, accepted up to each Friday. This rule is not a hard and fast one, but we cannot guarantee insertion after that time.

Marriages, birth and death notices inserted free.

NOTICE TO CORRESPONDENTS

We invite Correspondence on all matters of public interest, and especially country news, but reserve to ourselves the right to omit any part or all of the copy submitted. The name and the address of the correspondent must accompany all letters for insertion, though not necessarily for publication.

Country correspondents are requested to have their copy reach the office by Tuesday noon each week. Country letters arriving after the latter part of the week are frequently crowded out, and by the next week some of the news has lost much of its value on account of its age.

JOB WORK

THE REVIEW OFFICE is well supplied with all kinds of type, and is prepared to execute at the shortest notice any job work from the distribution of cards to full sized posters.

A postcard from D. Needham this week states that he has just left Canada with a party of friends for Los Angeles, Cal., from whence he will return to Bow Island arriving here the beginning of March.

On Friday last about twenty of the young people of the town made up a sleighing party and paid a visit to the residence of Mrs. Fisher of a son.

The boxing contest at Taber on Saturday evening last between G. R. Howden and Kid Jones of Taber resulted in a verdict being given the latter in the second round.

Donovan & McGee, received a car of agricultural implements on Tuesday together with a 25 hp. gasoline tractor. This latter is a six, bottom breaker, P. & O., and has been sold to J. Long.

R. E. A. Colp in carrying out his plan of enlargement has purchased the stock and machinery, etc., of G. R. Howden, and will run a tinmith and plumbing business in connection with his hardware. He also received another car of hardware on Tuesday.

Roy Beattie and R. E. A. Colp have gone into the automobile business. Their first drive on Tuesday night. Roy states, would have been very enjoyable but for an extraordinary money uprush in the price of his chauffeur to exceed the speed limit.

Eight hundred Sunday school scholars attended Knox church, Lethbridge, Sunday to celebrate the silver anniversary of the organization of Sunday schools in that town. J. D. Higginbotham, the first superintendent, has held that office in Knox during the whole quarter century.

Diverting water which now flows into the Hudson Bay from the body of water to the Gulf of Mexico, with the idea of diverting it feed moisture to more than 200,000 acres of Montana land, is involved in the construction of the great Milk River irrigation project in Montana construction of which will soon be begun.

W. R. Birch, formerly of Medicine Hat and Lethbridge, has recently entered into partnership with Louis Stengel, of Ottawa, now of the Canadian Flexible Ladder Co. of Perth, is visiting his brother here, Rev. M. L. Wright.

A company of Windsor, Ont., engineers are applying to the Council of Saskatchewan for a franchise to pipe the streets with natural gas. Boring experiments in the past, it is said, has proven the existence of gas in that district.

A new townsite on the Tofield Calgary branch of the Grand Trunk Pacific railway has just been opened and named "Husky." It is 45 miles east of Ingleton and the second townsite in the district. The steel will probably reach there by July 1.

with regard to the lumber company placing cables on Main Street, except ordered to be sent back for signature.

FOSTER'S FORECAST.

Washington, D.C., Feb. 11.—Last bulletin gave forecasts of disturbance to cross continent 10 to 11, warm wave 9 to 13, cold wave 12 to 10. During and just previous to this disturbance will be unusually warm, and following it much colder weather, probably amounting to a cold wave. This will also be one of the principal precipitation periods of the month. Most precipitation in southern and northwestern states and eastern provinces. Not much precipitation in western provinces and northwestern states.

Next disturbance will reach Pacific coast about 15, cross Pacific slope by close of 16, great central valleys 17 to 19, eastern sections 20. Warm wave will cross Pacific slope about 18, great central valleys 19, eastern sections 21. This disturbance will end the excessively warm weather of this month west of meridian 85, where the February thaw, as farmers and planters call it, will have prevailed. Cold weather will follow and, except for a long spell of unusually cold weather will continue to March 12. I am sorry to make this statement, because it means the destruction of a large part of the prospective fruit crop of 1911 between meridian 85 and the Rockies. It also makes great damage to winter wheat and other winter grains, which in southern locations, which the late freezing weather may not reach.

Another disturbance will reach Pacific coast about 21, cross Pacific slope by close of 22, great central valleys 23 to 24, eastern sections 24. Warm wave will cross Pacific slope about 23, great central valleys 24, eastern sections 25. A cold wave will cross Pacific slope about 24, great central valleys 25, eastern sections 26.

The warm wave will be moderate, the low temperature was preceding it will be cold, and the falling temperature following will be a cold wave with freezing temperatures in most sections north of parallel 32. The cold wave, with some snows, will continue to go down till very cold is reached near March 1. Severe storms will reach parts of the country, and the weather will be of the moderate variety in large sections of this continent.

DOUBLE MURDER AT TABER.

Continued from page 1.
Taking her at the back of the building and filling her with bullets. The fact that many shots were fired into the woman's body would indicate that the murderer had been filled with particularly animosity against the woman. A Japanese who has been hovering around town for the last few days is evidently suspected of having committed the crime. He is being sought for. This suspicion is heightened by the fact that he cannot anywhere be found this morning. The Chinaman arrived in the town at twelve this morning.

Lethbridge, Feb. 15.—It is almost certain that Chiyama, the Japanese, is the murderer of Louise Mackenzie, often known as "Rube Adams" and Jack Erskine in a shack two miles outside of Taber. He was in Lethbridge the night before the murder and is known to have gone to Taber on the Flyer. The police are searching for him.

The arrest held at Taber yesterday by Coroner J. D. Higginbotham, of Lethbridge, continued today. The evidence confirmed the suspicion of the police that Chiyama is the guilty party. He had been frequently at the woman's house lately and on one occasion had tried to burn it down. He had made threats against the woman for deserting him. The crime was done on the story of the murder. The deceased woman was young, only about nineteen and was married in Crossbrook to the Japs. Seven months later she was found to have been a prostitute. Chiyama kept her in a dive at Crossbrook, frequented by her and a Japs, living on the street. He was a Japs, living on the street. He was a Japs, living on the street. He was a Japs, living on the street.
